

ARE YOUR COMPANY'S CREDENTIALS FOR SALE ON THE DARK WEB?

Digital credentials, such as usernames and passwords, connect you and your employees to critical business applications, as well as online services. Unfortunately, criminals know this – and that's why digital credentials are among the most valuable assets found on the Dark Web.

81%

of hacking-related breaches leverage either stolen and/or weak passwords

WHAT CAN YOU DO TO PROTECT YOUR BUSINESS?

The key to **pro-active cyber security** is identifying the "loop-holes" before someone else does. With our Dark Web scan, we can **instantly detect** if your company is at risk due to **exposed credentials**. The report is then generated by our team of analysts and bots that essentially scrape data from the dark web and cross reference that with your domain. From there, we'll list any **emails and passwords** that appear from the search.
