

36% is the average reduction in IT costs by running routine audits and setting technological road maps. Plan ahead and budget for all IT expenses to stay ahead of the curve.

Infrastructure is the foundation upon which all of your technology rests. Just like with a house, it's extremely important to verify its integrity before you begin to build on top of it. Poor initial design decisions can lead to downtime, lost sales and ultimately drive up your total cost of ownership. This detailed analysis page represents an overview of the state of your Base Plan Infrastructure. Each audit item is summarized, and color coded for easy identification and the results for this section are reflected in the Infrastructure audit score.

Server

The server(s) is over 5 years old, running a non-supported OS.

Business Continuity

No Business Continuity plan exists in the case of a disaster.

Backup & DR

Online backup service is backing up server(s) on regular basis.

Workstations

The WS's are within 5 years old and out of warranty.

Remote Accessibility

Provided through a remote-control solution such as RDP.

Scalability

Additional resources only available by purchase or replacement.

Requires Immediate Attention

Needs improvement
